

Product and service provider for pharma and biotech aims to lower costs

Selvita is a product and service provider for the pharmaceutical and biotechnology industry, which aims to deliver solutions targeted at lowering the cost of introducing innovative compounds to the market.

As a privately funded start-up, Selvita has benefited greatly from the Krakow Life Science Cluster's infrastructure which not only attracts entrepreneurs and financial resources, but also provides attractive financial conditions through government support such as tax incentives.

As the cluster's strong science-based infrastructure attracts many skilled scientists from abroad, Selvita was able to employ a skilled and internationally experienced team of specialists in the fields of molecular biology, biotechnology, chemistry, pharmacy, and informatics.

Selvita's activity includes advanced protein modelling solutions, custom in silico library construction, lead generation and optimisation, contract synthesis and synthesis' path optimisation.

Selvita is also actively involved in drug discovery and conducts its own develop-

ment projects in the areas of oncology, CNS and infectious diseases. Thanks to the cluster's support of innovation, and the effort spent on encouraging effective commercialisation of research results, the compounds which Selvita has under development originate from research at Polish universities, and Selvita conducts their development up to the pre-clinical stage.

Thanks to one of the oldest and most prestigious European universities being located in Krakow, this region has always had a very good reputation for highly skilled scientists

Through the creation of an effective life science network, the cluster enables global connectivity. Selvita's collaborations up to date include a range of Polish universities and research institutions, as well as pharmaceutical companies from Germany, USA, France, Sweden, and Poland.

Cluster removes barriers

The Life Science Cluster in Krakow was established in October 2006 as a collaborative project of 32 institutions representing business, science and healthcare with active support, guidance and facilitation by local government.

As with every successful cluster, Krakow's Life Science Cluster has a range of factors in place, which provide its participant companies and entrepreneurs with support allowing to build on strengths and remove barriers to development.
